

CTEK MULTI XS 4003

CTEK, a leading global brand in the care and maintenance of vehicle batteries, continues to set the trend in battery technology by introducing the state-of-the-art Multi XS 4003 charger with digital capabilities.

"The Multi XS 4003 uses a digital microprocessor to control the battery charging process. This new technology streamlines the charging process making the charger one of the most intelligent products on the market," Bengt Wahlqvist, international expert in battery technology and electrochemistry, and founder of CTEK said.

"The new advanced digital technology in the Multi XS 4003 not only reduces the battery charging time, but is also easier and safer for consumers as the current and voltage can be meticulously controlled."

Relating the new technology in the chargers to the upgrade of television from analogue to digital formats, Bengt said, "The new technology in the Multi XS 4003 benefits consumers with increased speed and accuracy

in charging and maintaining their battery, much like viewers enjoying superior picture and sound quality on their television with an upgrade of technology."

The integration of digital capabilities in a consumer charger is an industry first in battery maintenance technology. Digital capabilities have previously only been available in CTEK's range of professional products, but with the Multi MX 4003, consumers who own any type of vehicle can now enjoy a compact and affordable charger with the features of a professional product.

In addition, the Multi XS 4003 features a practical display showing diagnosis of the battery, the charging process, when to start the vehicle, and other smart functions, giving the user more control and visibility over the charging process.

Retaining CTEK's patented eight-step approach to battery care, the Multi XS 4003 maintains batteries at the touch of a single button, to ensure that any lead-acid battery is optimally

conditioned, charged and maintained, indefinitely if required.

The tried, independently tested and patented technology of CTEK can extend the life of the battery significantly, saving users money on premature battery replacement.

The charger comes with a five year warranty, is easy to operate, fully automatic and requires no specialist knowledge for use. RRP \$149. A full range of additional connection accessories are also available for added user convenience. For more information or to find the nearest stockist, visit www.ctek.com
