

TAKE BACK CONTROL OF YOUR TIME WITH CTEK
CT5 TIME TO GO charger launched

Isn't it great when you have control over your own time? Finding time for car maintenance can prove difficult, especially when you don't know how long a task is going to take. Up until now, this has been the case for battery charging, a vital activity that can prevent vehicle breakdowns and extend battery life. That is all about to change thanks to CTEK, a leading global brand in the care and maintenance of vehicle batteries, who have launched the CT5 TIME TO GO charger. A simple to use 12V, 5Amp battery charger that allows you to stay in control and plan your day, by accurately predicting remaining charging time.

The CT5 TIME TO GO charger takes a different approach to battery charging – it tells you when your battery will be ready for use. A series of LED lights indicate the different charging stages and how long it will take before the battery is charged and ready to go. There are also indicators that tell you when you can safely TRY to start your vehicle if you are charging a flat battery and when the battery is ready to GO.

Easy to use and fully automatic, the CT5 TIME TO GO charger uses advanced technology to constantly monitor the battery's power and health and take action when required. The CT5 TIME TO GO charger has three key charging & maintenance stages to maximise the power and lifetime of the battery. It will make sure your battery is always in good condition and you can even repair a discharged battery that has become flat. As well as the NORMAL charging mode the charger has a RECOND mode for batteries that haven't been charged for long periods of time and need a really good battery condition and re-charge and AGM mode for batteries used in Start-Stop vehicles.

Sten Hammargren, Consumer Business Unit Manager at CTEK said "We are really exciting to be bringing this product to market! The CT5 TIME TO GO charger is the first charger in the world to tell you exactly when your battery will be charged and ready to

go. It's a reflection of the demands that today's consumer has for household tools and accessories that can keep them in the picture – we've seen it with other household goods such as washing machines and tumble dryers and now you can have this type of information from your battery charger!"

As with all CTEK products, the CT5 TIME TO GO charger is fool proof to connect, spark proof and reverse-polarity protected, for user safety. Extremely clean voltage and current delivery ensures vehicle electronics are protected meaning that there is no need to disconnect a battery when charging. It can be attached to the battery indefinitely if required without risk of over or under charging.

The CT5 TIME TO GO battery charger comes with a five-year warranty. A full range of additional connection accessories are also available for added user convenience.
